

# MakerDAO Critical Vulnerability Notice

OPENZEPPELIN SECURITY | MAY 6, 2019

Security Audits

While working on an audit for the [Coinbase](#) team, we found a critical vulnerability in one of the [DappHub](#) library contracts. This affects the [MakerDAO](#) system currently in production.

We privately disclosed the vulnerability to the MakerDAO team, and we have been working together in the past few days on a code fix and a mitigation plan.

After reviewing the amended contract, we can confirm that the vulnerability has now been fixed. The security of the MKR token contract is *not* affected by our findings.

**If you are a user of MakerDAO, head to [their reddit post](#) to understand if you need to take action.**

We will provide a detailed technical analysis of the vulnerability and fix once the mitigation plan has come to an end.
